About Me

I'm a curious individual and an avid learner with professional full-stack software engineering experience. I thrive on tackling interesting and complex challenges.

Skills

C#	Typescript	SQL	Bicep	.NET
React	Azure	GitHub Actions	Azure DevOps	

Education

Computer and Network Engineering (Honours)
Mar 2016 to Mar 2020

Work Experience

Full Stack Software Engineer

JET Charge | Oct 2021 - Present

- Developed Australia's first leading web app using node-based UI to set up, deploy, and manage an EV charging site.
- Implemented RESTful APIs for communication between the local front-end and back-end systems.
- Lead development of apartment EV charging billing solution.
- Partner and contractor management solution enabling organisations to provision and manage EV charging assets.
- Zero Touch Config (ZTC) solution, reducing the technical ceiling of the onboarding COREs remotely without the need for an on-site technician.

Graduate IT Specialist

EnergyLocals | Sep 2019 - Sep 2020

- Automated ETL of AEMO MMS electricity market data for internal reporting and analysis of prices, demand, and supply.
- Managed IT operations, including equipment provisioning, technical support, and automated backup for critical systems and data.

IT Specialist

EnergyLocals | Sep 2020 - Oct 2021

- Developed a white-label customer portal for sign-ups, energy plan management, billing, and usage tracking, integrated with identity verification (Westpac, Equifax).
- Managed critical IT systems (VPS, databases, tools) and provided technical support to staff and customers.
- Improved operational efficiency by provisioning IT assets and quickly resolving staff/customer technical issues.
- Developed ETL tools to automate data centralisation for analysis, compliance reporting, and internal audits.

Projects

LLM Native Virtual Machine

An experimental virtual processor that has an LLM instead of an ALU.

Wobbly ML

Jul 2022 - March 2023

A machine learning library using the the Neural Networks From Scratch book.

GPT Decoder

Apr 2023 - Nov 2023

A simple GPT decoder for educational purposes following Andrej Karpathy's "Let's build GPT: from scratch, in code, spelled out" with some optimisations.

Lox Crystal Lang

Aug 2021 - Nov 2022

A Crystal programming language implementation of the Lox programming language using the Crafting Interpreters book.
