About Me

I am a Senior Full Stack Engineer specialising in complex data integrations, billing systems, and energy/EV infrastructure platforms. I bridge the gap between high-throughput C#/.NET backend architectures and fast-moving, modern user interfaces.

Skills

C#	Typescript	SQL
Bicep	.NET	React
Azure	GitHub Actions	Azure DevOps

Education

Computer and Network Engineering (Honours)
RMIT | Mar 2016 to Mar 2020

Projects

Zero-Touch Configuration

@JET Charge
Cloud-based EV commissioning system enabling secure, plug-and-play remote hardware configuration and synchronisation.

Billing for Apartments

@JET Charge
Billing system for apartment EV energy usage, integrating with existing utility data and providing detailed usage reports.

Edge Energy Management System

@JET Charge
Offline-capable dynamic edge load management system with real-time local monitoring dashboards.

Professional History

Full Stack Software Engineer

@JET Charge | Oct 2021 - Present

- Architected and implemented major upgrade and redesign of legacy backend system, transitioning from a monolithic to modular modern modular monolith, improving maintainability and scalability.
- Designed RESTful APIs for communication between the React UI and the C# backend hosted on device, enabling on-site configuration and monitoring of EV charging assets.
- Engineered partner and contractor management solutions that streamlined the cloud commissioning pipeline of distributed EV charging assets.
- Led the integration of Stripe recurring billing into the .NET backend and React UI, automating multi-tenant invoicing and payment cycles for apartment charging installations.

Graduate IT Specialist

@Energy Locals | Sep 2019 - Oct 2020

- Engineered C# data-processing programs and SQL procedures to reconcile AEMO market settlement datasets, ensuring audit compliance and transaction reconciliation accuracy.
- Designed automated backup pipelines and disaster recovery protocols to secure critical databases and infrastructure environments.

IT Specialist

@Energy Locals | Oct 2020 - Oct 2021

- Designed and maintained high-throughput ETL data pipelines using C# and SQL to consolidate operational and compliance reporting data.
- Administered high-availability Virtual Private Servers (VPS) hosting core operational databases, implementing monitoring protocols and regular updates.
- Integrated secure Westpac and Equifax identity verification services, ensuring compliance with strict utility-sector regulatory requirements (KYC) while maintaining a seamless onboarding flow.
