OVERVIEW

I build software and systems that solve real-world problems for electric vehicle charging and clean energy companies. Over the last 5+ years, I have led software delivery for commercial EV fleets across Australia, working with clients like **Woolworths, RACV, SG Fleet, and Team Global Express**.

EXPERIENCE

Full Stack Software Engineer
JETCharge, Melbourne | Oct 2021 – Jun 2026

- **Engineered Edge Energy Platform (CORE v2):** Architected an offline first C#/.NET edge daemon communicating over Modbus and OCPP, enabling 5x EV charging density on constrained grids and saving clients $1.6M - $5M in substation upgrades.
- **Streamlined Remote Provisioning (ZTC):** Built a React visual builder and .NET Core cloud sync engine with schema decoupling, reducing field setup from 6 to under 3 hours and cutting $1M+ in technician deployment cost.
- **Unlocked Recurring Revenue (Billing):** Built an automated .NET Core metering engine integrated with Stripe Connect split disbursements and SQL Server, driving $100k - $300k/year in new recurring strata SaaS and transaction revenue.
- **Scaled Platform Reliability & Self-Service:** Shipped multi-tenant partner portals (React) and centralised C#/SQL data permissions, saving $300k - $500k/year in operational support while protecting fleets from $50k/hour outage penalties.

IT Specialist
EnergyLocals, Melbourne | Sep 2020 – Oct 2021

- **Automated Retail Customer Onboarding:** Built a white label onboarding web platform (Laravel/PHP, Bootstrap) integrated with Westpac and Equifax KYC APIs, cutting verification from 2 - 3 days to under 60s and saving 3,300+ operational hours across 10,000+ accounts.
- **Streamlined Regulatory & Business Data:** Built automated Python and SQL data pipelines consolidating compliance metrics and reporting, eliminating spreadsheet errors and saving 10 - 15 analyst hours weekly (~$40k/year in operational costs).

EDUCATION

Computer and Network Engineering
RMIT
Mar 2016 – Mar 2020

SKILLS

- .NET, C#, SQL
- React, Typescript
- Azure, Bicep, GitHub Actions, Azure DevOps

- **Hardened Internal Operations:** Administered high availability Linux VPS database servers, authoring automated Bash and PowerShell disaster recovery pipelines and workstation provisioning scripts that cut onboarding from 2 days to under 2 hours

Graduate IT Specialist
EnergyLocals, Melbourne | Sep 2019 – Oct 2020

- **Automated AEMO Market Reconciliation:** Engineered automated Python and SQL reconciliation pipelines for AEMO MMS wholesale electricity settlements, auditing millions in daily transactions with 100% financial accuracy and delivering real time pricing feeds.
- **Hardened Core Systems & Operations:** Automated database disaster recovery and backup workflows to ensure business continuity for critical customer data, standardizing developer onboarding through automated provisioning scripts.
