About Me

Senior Full-Stack Engineer specializing in high-throughput C#/.NET backend architectures, relational data modeling, and modern React interfaces for complex, compliance-driven industries.

Skills

C#	Typescript	SQL	Bicep	.NET
React	Azure	GitHub Actions	Azure DevOps	

Education

Computer and Network Engineering (Honours)
Mar 2016 to Mar 2020

Work Experience

Full Stack Software Engineer

JET Charge | Oct 2021 - Present

- Designed and optimized the C# backend architecture for an autonomous EV load management system, ensuring 99.9% uptime for real-time edge devices.
- Architected high-throughput RESTful APIs connecting node-based UIs with complex back-end state management.
- Engineered a centralized C#/.NET partner management integration enabling organizations to securely manage EV assets.
- Implemented apartment billing solutions in C# integrating Stripe for accurate, auditable invoicing of real-time usage data.

Graduate IT Specialist

EnergyLocals | Sep 2019 - Sep 2020

- Engineered automated data processing programs for AEMO market settlements using C# and SQL, handling high-volume transaction data with strict audit compliance.
- Maintained automated backup infrastructure for critical databases and enterprise systems ensuring disaster recovery reliability.

Projects

LLM Native Virtual Machine

An experimental virtual processor that has an LLM instead of an ALU.

Wobbly ML

Jul 2022 - March 2023

A machine learning library using the the Neural Networks From Scratch book.

IT Specialist

EnergyLocals | Sep 2020 - Oct 2021

- Built robust ETL pipelines using C# and SQL Server to automate data centralization for compliance reporting and audits.
- Administered high-availability Virtual Private Servers (VPS) hosting core operational databases and enterprise tools for energy platform users.
- Integrated secure third-party identity verification services (Westpac, Equifax) satisfying complex regulatory requirements.

GPT Decoder

Apr 2023 - Nov 2023

A simple GPT decoder for educational purposes following Andrej Karpathy's "Let's build GPT: from scratch, in code, spelled out" with some optimisations.

Lox Crystal Lang

Aug 2021 - Nov 2022

A Crystal programming language implementation of the Lox programming language using the Crafting Interpreters book.
